

# Program Sheet

P-01

*This is the first document in our Plan to Play™ System for designing and building recreation spaces.*

*Use it to think about your space and how you can use it most effectively, to brainstorm designs or just to make sure you haven't forgotten anything.*

*After you're finished, you can send it back to us at the email address below and a member of our sales or design team will contact you to go over your selections.*

*P.O. Box 57246  
Murray, UT 84157*

**001**

## Play Equipment

*What type(s) of play elements do you like? What type(s) do you feel would best fit your space? It could be helpful to think in terms of textures, sounds, colors, and materials as you select components for your space.*

## Look + Feel

*How do you want visitors to feel when they visit your playground? It could be helpful to think about what defines and unifies your community. Is there a prominent industry (e.g. farming) or special attraction (e.g. armed forces base) that serves as the principal identity for your community?*

## Visitors

*What age group(s) will your playground serve and how will the components you select address inclusivity? Inclusivity doesn't just happen. Planning for how your playground will address and promote equality among all visitors will ensure everyone feels welcome.*

## Playground Components

### Modern

*Classic post + deck systems that take whatever kids and weather can throw at them.*

### Rocks + Ropes

*Precast concrete rocks and mind-bending nets that take play to the next level.*

### Wooden

*Sometimes the best solution is the warm, natural look and feel of wood.*

### Musical Instruments

*Sound, rhythm and collaboration come together to help children and adults express themselves.*

## Surfacing Types

### Poured-in-Place

*A combination of rubber granules and a cushion layer of shredded rubber bonded with a polymer*

### Bonded Rubber Mulch

*Shredded rubber mulch blended with polyurethane adhesive binders*

### Engineered Wood Fiber

*Wood fibers that create a loose fill surface that “knits” together*

## Surfacing

002

*What type of surfacing do you like? If you have other spaces with play components, what surfacing is used there? It can be helpful to think about elevations when deciding what surfacing is most appropriate. Remember that materials can have significantly different impact attenuation ratings.*

## Shade

*Are you planning to construct your playground in an area with lots of mature trees that will provide a lot of shade? Are there any areas in your space where there is no natural shade at all? Skin cancer is the most common cancer in the United States, and good UV hygiene habits begin as children.*

### Components

*What type(s) of gathering area(s) are in your space? How can you best promote appropriate usage in those area(s)? Shelters, tables and benches all signal pauses that are just as important in recreation as play or exercise and foster interaction and community connections.*

### Look + Feel

*What style of site amenities do you like? How will those amenities contribute to the overall feel of the space?*

### Visitors

*How can you make your space appealing to different demographic and age groups? Adults like having fun too! Making sure your space addresses their needs as well is a great way to ensure consistent, appropriate usage. Outdoor fitness components are worth their weight in gold.*

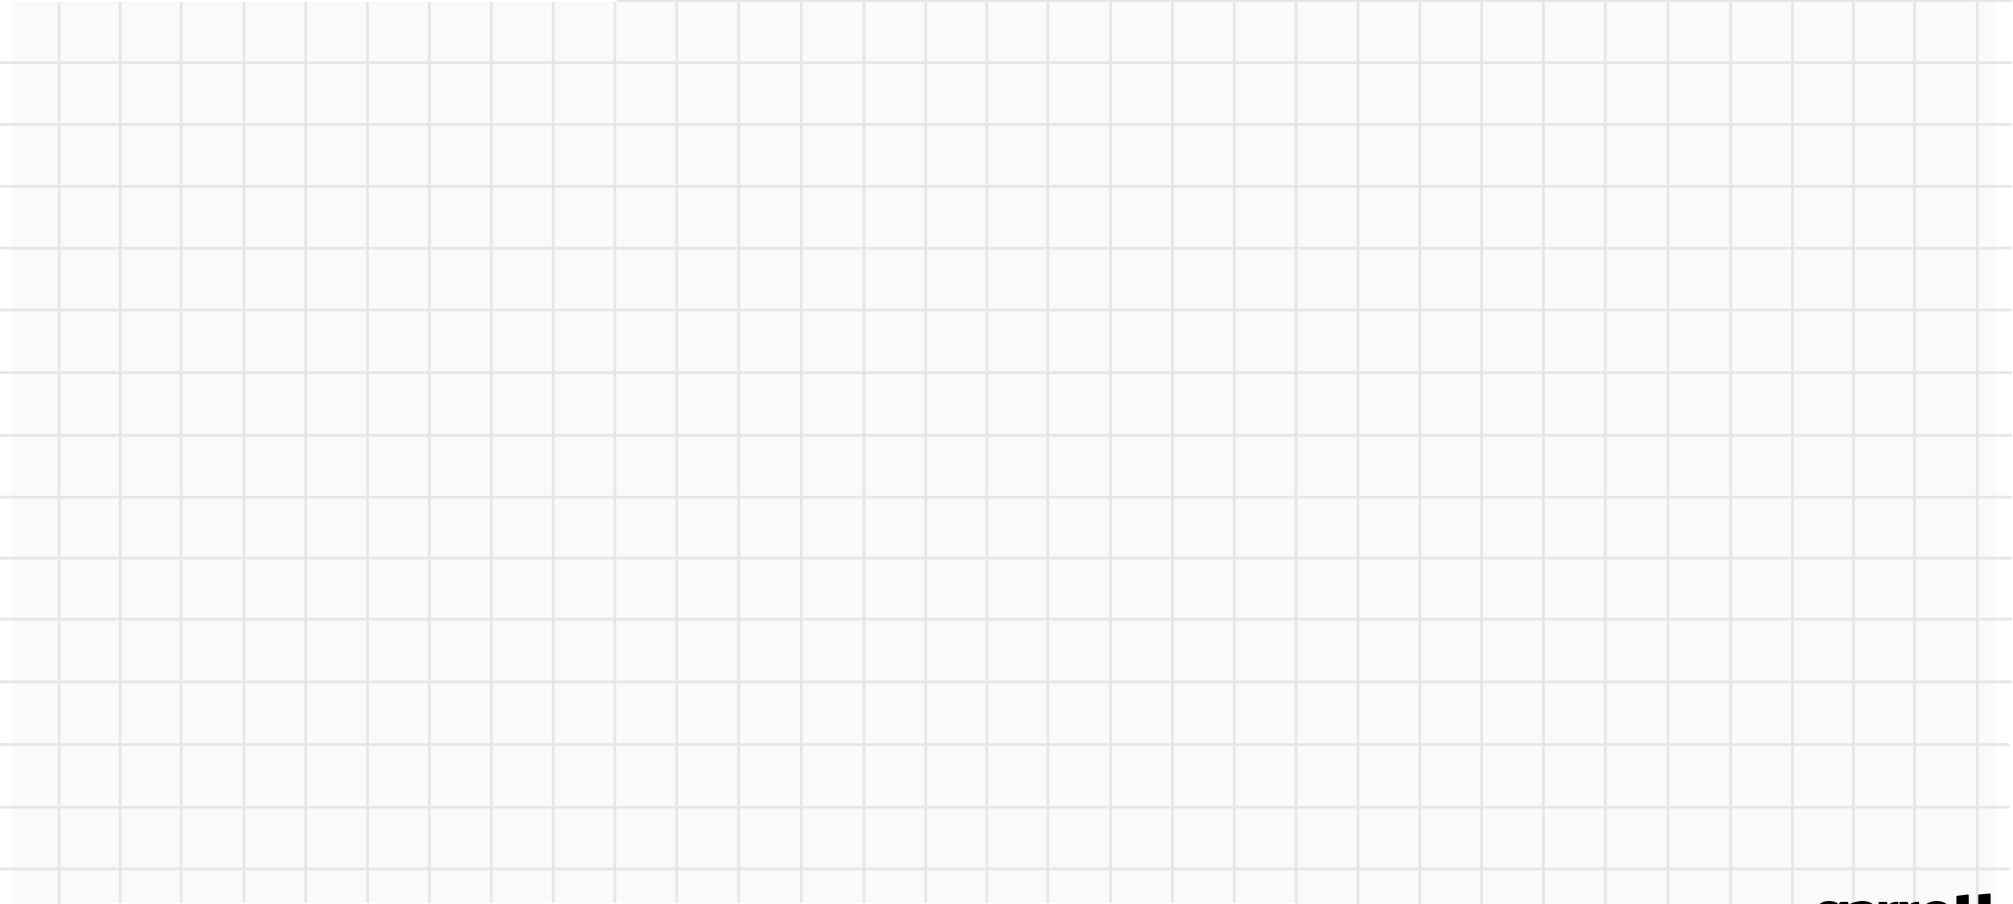

## Preliminary Layout

*Sketch, color, scribble on this page to think about how different components and amenities will work together in your space.*

*It could be helpful to think in terms of flow, traffic patterns, and existing site conditions.*

### Site Shape:

Site Dimensions:      x      ft

*Not much of an artist? Send us an email or give us a call and we'll design your space for free!*
